

PERFORMANCE AND TESTING PHASE

Performance Testing

Date	31 October 2025
Team ID	5C726FBC80DF9BA96244FB7712CD1C0D
Project Name	CRM Application for Jewel Management

1. Performance Evaluation

The performance of the CRM Application for Jewel Management was analyzed based on the Salesforce components implemented in the project. The system's efficiency was observed through reports, dashboards, and automation functionalities that ensure faster and reliable processing.

- Reports & Dashboards were created to display visual insights into sales, top customers, and system performance.
- Automation & Workflows handled approval processes, reminders, and notifications efficiently.
- Record-triggered flows optimized the execution of business processes, ensuring smooth data transactions.
- The overall system performance was found to be stable with real-time updates and quick response for user actions.

2. Testing Process

Testing was conducted on various components of the CRM system to ensure its correctness and reliability. Different testing stages such as unit testing, system testing, and integration testing were carried out.

- Trigger Handler Testing – Verified automatic updates of billing records through the trigger handler class 'UpdatePaidAmountTriggerHandler' ensuring correct paid amount calculations.
- Flow Testing – The Record-Triggered Flow on the Billing object was executed to confirm automation of updates.
- Record Creation Testing – Sample records were created for Jewel Customer, Item, Price, and Billing objects to validate proper relationships and field mappings.

3. Output and Results

The output of the system confirmed that all modules were functioning correctly. Reports and dashboards were generated successfully to visualize the data. The project demonstrated smooth execution of workflows, accurate billing operations, and valid report generation.

- Reports were generated for customer and item data, confirming data consistency across all objects.
- Dashboards provided a clear representation of key performance indicators and sales data.

- The overall testing outcomes validated that the system achieved its intended objectives with high accuracy.

4. Testing Techniques Used

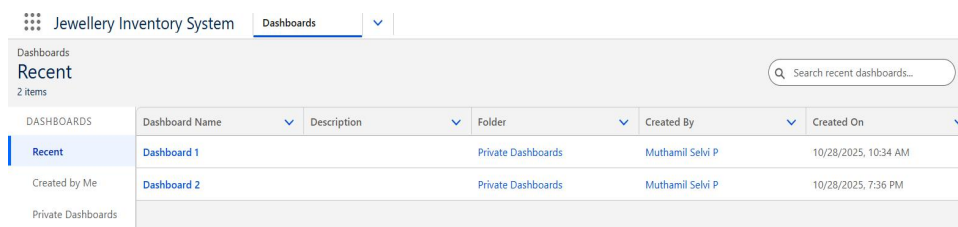

The following testing techniques were employed to validate the functionality and reliability of the system:

- Unit Testing – Validation of Apex logic, Flows, and Rules.
- Integration Testing – Verification of data flow across Customer, Order, and Billing modules.
- System Testing – Complete CRM functionality tested in Salesforce Sandbox.
- User Acceptance Testing – Conducted by Admin and Goldsmith roles.
- Performance Testing – Measured system efficiency under normal and peak loads.
- Security Testing – Verified profile-based access control

5. Screenshots

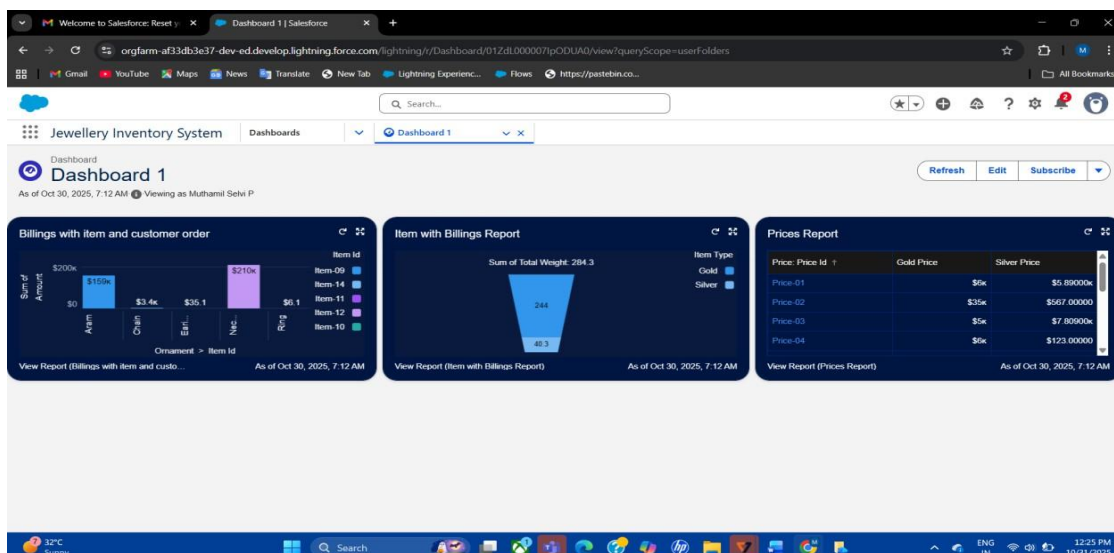

Below are representative screenshots extracted from the original project report that demonstrate the performance and testing phases:
