

PROJECT DESIGN PHASE

Problem Solution Fit

Date	31 October 2025
Team ID	5C726FBC80DF9BA96244FB7712CD1C0D
Project Name	CRM Application for Jewel Management

1. Problem Identification

The jewellery industry faces several challenges in managing daily business operations effectively. Traditional methods such as manual inventory tracking, handwritten billing, and unorganized customer data often lead to inefficiencies and errors.

Key problems identified include:

- Difficulty in maintaining accurate stock levels for gold, silver, and diamond items.
- Manual billing processes causing delays and calculation errors.
- Lack of centralized data for customers, suppliers, and sales orders.
- Limited visibility into business performance and sales analytics.
- Poor coordination between sales staff, goldsmiths, and management.
- Absence of automation in approval processes, reminders, and communication.

2. Existing System Analysis

In traditional jewellery management systems, most operations are done manually or using simple spreadsheet-based tracking. This leads to several inefficiencies and data inconsistencies.

- Data redundancy and inconsistency.
- Inaccurate sales and stock reports.
- High dependency on manual entry and human supervision.
- Difficulty in tracking customer purchase history and payment records.
- Inefficient communication between departments.

These limitations result in time delays, reduced accuracy, and poor decision-making, affecting business growth and customer satisfaction.

3. Proposed Solution

The proposed solution is a Salesforce-based CRM Application for Jewel Management that automates and streamlines all jewellery business processes on a single, cloud-based platform.

- Automate core business operations like sales, billing, and inventory tracking.
- Maintain centralized data for customers, suppliers, and jewellery items.
- Provide role-based access control for Admin, Goldsmith, and Worker users.
- Enable real-time reporting and dashboards for business analytics.
- Reduce manual effort using Record-Triggered Flows, Validation Rules, and Approval Processes.
- Enhance communication through automated notifications and workflows.

4. Solution Fit Justification

The Salesforce CRM platform aligns perfectly with the requirements of a jewellery business because of its flexibility, scalability, and cloud-based accessibility.

- Efficiency: Real-time updates, automated billing, and quick data retrieval.
- Accuracy: Validation rules prevent incorrect data entries.
- Transparency: Dashboards and reports provide complete business visibility.
- Security: Role-based profiles ensure controlled access to sensitive data.
- Scalability: The system can be easily extended to support multiple branches or product categories.

Thus, the CRM Application offers a perfect Problem–Solution Fit by addressing the key operational issues faced by the jewellery industry with automation, reliability, and intelligent analytics.
