

PROJECT DESIGN PHASE

Proposed Solution

Date	31 October 2025
Team ID	5C726FBC80DF9BA96244FB7712CD1C0D
Project Name	CRM Application for Jewel Management

1. Introduction

The proposed system, CRM Application for Jewel Management, is a Salesforce-based cloud solution that automates and integrates all essential operations of a jewellery business. It eliminates manual processes by leveraging Salesforce tools like **Custom Objects, Record-Triggered Flows, Validation Rules, Reports, Dashboards, and Apex Triggers**.

This solution ensures efficient handling of jewellery inventory, customer data, billing, and supplier details, enabling real-time monitoring and decision-making for business owners.

2. Objectives of the Proposed System

- To automate jewellery business processes and minimize manual work.
- To maintain accurate and centralized records for customers, products, and sales.
- To manage stock levels, pricing, and billing transactions efficiently.
- To provide interactive dashboards and reports for performance tracking.

3. Key Features

- **Custom Objects:** Used to store data for Jewel Customers, Items, Orders, Price Books, and Billing.
- **Automation & Flows:** Implemented to automatically update records and notify users when specific conditions are met.
- **Validation Rules:** Ensure data accuracy by preventing invalid or incomplete entries.
- **Reports & Dashboards:** Provide visual analytics of sales, top customers, and stock performance.
- **Profiles & Roles:** Define user permissions (Admin, Goldsmith, Worker) for secure operations.
- **Trigger Handlers:** Manage business logic such as automatic billing updates when payments are made.
- **Lightning App Builder:** Used to create a unified and user-friendly interface for all operations.

4. System Design Approach

- **Data Layer:**
Consists of custom Salesforce objects for Customer, Item, Price, Billing, and Orders. Relationships among these objects are created using **Lookup and Master-Detail relationships**.
- **Application Layer:**
Business logic is implemented using **Apex Classes, Triggers, and Record-Triggered Flows** to automate billing updates and order processing.
- **Presentation Layer:**
Designed using **Lightning Pages and Tabs**, providing a structured navigation system that allows users to view and manage jewellery data effectively.
- **Automation Layer:**
Includes **Approval Processes, Email Alerts, and Scheduled Flows** to streamline internal business workflows.

5. Benefits of the Proposed Solution

- Improved **accuracy and reliability** in data handling.
- Reduced **manual errors** and **processing time**.
- Enhanced **customer relationship management** through integrated CRM functions.

- Real-time **inventory tracking** and **sales performance monitoring**.
- Cloud-based accessibility ensures **anytime, anywhere data access**.
- Enhanced **security and role-based permissions** for different user levels.

6. Conclusion

The proposed Salesforce-based CRM solution provides a robust and scalable platform for managing jewellery business operations efficiently.

It integrates inventory, billing, and customer management within a single ecosystem, ensuring smooth business flow, better decision-making, and improved customer satisfaction.
