

REQUIREMENT ANALYSIS PHASE

Requirement Analysis

Date	31 October 2025
Team ID	5C726FBC80DF9BA96244FB7712CD1C0D
Project Name	CRM Application for Jewel Management

1. Introduction

The Requirement Analysis phase focuses on understanding the functional and non-functional needs of the CRM Application for Jewel Management. This phase ensures that the system aligns with the business goals of the jewelry enterprise and leverages Salesforce CRM to manage customers, items, orders, and billing efficiently.

2. Objectives of Requirement Analysis

- To identify the specific business requirements for jewelry management.
- To determine user roles and define their access levels within Salesforce CRM.
- To gather data requirements for customers, inventory, orders, and billing.
- To define automation and reporting needs using Salesforce tools.
- To ensure security, accuracy, and scalability in the CRM system.

3. Methodology

- Business Process Study: Understanding jewelry store operations including customer management, inventory updates, and billing workflows.
- User Interviews: Gathering requirements from key users — Admin, Goldsmith, Worker.
- Salesforce Platform Review: Identifying suitable CRM components like objects, fields, flows, and dashboards.
- Feasibility Study: Evaluating cost, time, and technical feasibility of Salesforce implementation.

4. Functional Requirements

Module	Functional Requirement
Customer Management	Create, update, and view customer records.
Inventory Management	Add and track jewelry items by type (Gold, Silver, Diamond).
Order & Billing	Generate bills, manage payments, and update order status.
Reports & Dashboards	Display sales performance, item trends, and billing summaries.
Admin Management	Manage user roles, permissions, and workflow approvals.

5. Non-Functional Requirements

Requirement Type	Description
Performance	System must handle multiple user operations simultaneously without lag.
Security	Implement Salesforce role-based access, data encryption, and secure login.
Scalability	Should support adding new jewelry categories, users, and features easily.
Reliability	Ensure consistent data backup and availability through Salesforce Cloud.
Usability	Provide a clean, intuitive interface

for all user roles.

6. User Requirements

User Role	Requirements
Admin	Full control over CRM data, workflows, and reports.
Goldsmith	Ability to manage item pricing, billing, and customer orders.
Worker	Update stock and assist with daily operations.
Customer	View or receive billing and purchase information.

7. System Requirements

Software Requirements:

- Salesforce Developer Edition
- Visual Studio Code
- Web Browser (Chrome or Edge)

Hardware Requirements:

- Laptop/Desktop with Internet Connectivity
- Minimum 8GB RAM, 100GB Storage

8. Output of Requirement Analysis

The outcome of the requirement analysis phase is a comprehensive document that outlines functional, non-functional, and system requirements. This serves as the foundation for the system design phase, ensuring that the CRM system aligns with user expectations and Salesforce CRM features.

9. Conclusion

The requirement analysis phase defines the scope and structure of the CRM Application for Jewel Management. By analyzing user needs, business operations, and Salesforce capabilities, this phase ensures the system is designed to meet functional requirements while maintaining scalability, performance, and security.
